2.1 Population Distribution Guided Notes

United Nations World Population Growth Projections

UN predicts ___ billion people will live on the planet by 11/15/22.

More than ___ times what if was in ____________.

By 2030: ____ Billion
By 2050: ____ Billion
By 2100: ____ Billion

More than half of growth will come from a handful of countries. List them below:

In the long term, population growth is ___________________________.

Peak of population growth was in _______ which was at ___% growth per year.

Now, we have fallen below _____% growth per year.

By 2080s, Growth rate will hit _____.

Before we can explain why it's slowing down, we must first ask why it has grown in the first place. The reason there was population growth is known as the ______________________ transition which means longer _________ and smaller _______________.

Drop in _______________ rates drives growth.

Reduction of ________________ rates brings growth to a close.

Once ________________ rates falls below ____, you have zero growth.

Growth is not even. Sub-Saharan Africa will _____________ by 2050.

Whole world is going through the ________________________ transition –just _______________ is very different.

Europe and North America finished demographic transition by ___________.

Demographic transition started in the rest of the world post __________.

Currently, Japan is _________________.

____________ will start to decline next year.

3 D’s of Population	
Demographics	**Demography Defined:** • **Crude birth rate:** • **Crude death rate:** • **Total fertility rate:** • **Life expectancy:** • **Infant mortality rate:**
Distribution	• **Define:** • **Describe:** • **Ecumene:**
Density	• **Define:** • **Describe:** • **Countries with high density populations:** **Population density** $= \frac{\textbf{Total population}}{\textbf{Surface km}^2} =$ **people/km^2** High = over 100 people/km^2 Medium = between 50 and 100 people/km^2 Low = between 25 and 50 people/km^2 Very low = under 25 people/km^2

Arithmetic Density Formula:	**Arithmetic Density Info:**	
Physiological Density Formula:	**Physiological Density Info:**	
Agricultural Density Formula:	**Agricultural Density Info:**	
Arithmetic Density of Egypt	**Physiological Density of Egypt**	**Agricultural Density of Egypt**

Where do we live?

Humans thrive on __% of the Earth's surface and only __% grow crops.

What kind of thematic map is this?

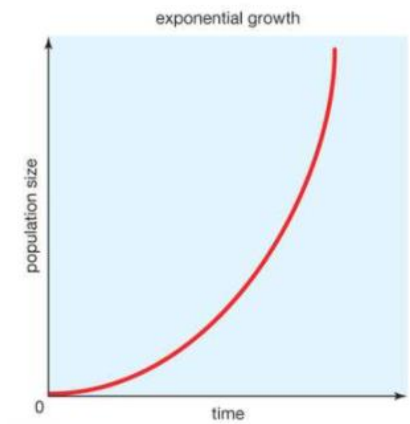
At 1 CE, where is most of the population? Why there?

Which event caused a visually powerful, rapid population explosion? Why?

2.2 Consequences of Population Distribution

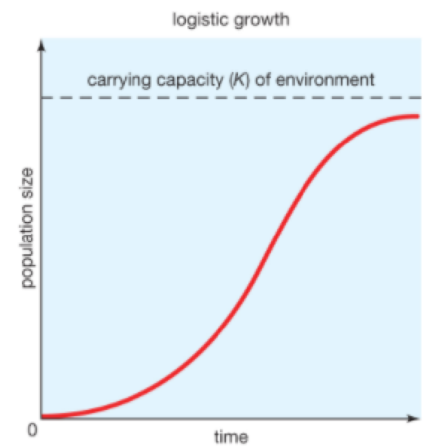
<u>Trends: J-Curve</u>

This graph shows our population growing exponentially. That means that population growth is proportional to the amount already present (2, 4, 8 16, 32…). This is RAPID growth.



<u>Trends: S-Curve</u>

This graph shows our population growing logistically. That means that population growth will decrease as we reach our maximum capacity (carrying capacity).



<u>Define carrying capacity:</u>
