

2.7 Population Policies Guided Notes

Types of Population Policies	Description & Examples
Antinatalist	
Pronatalist	
Results & Consequences	

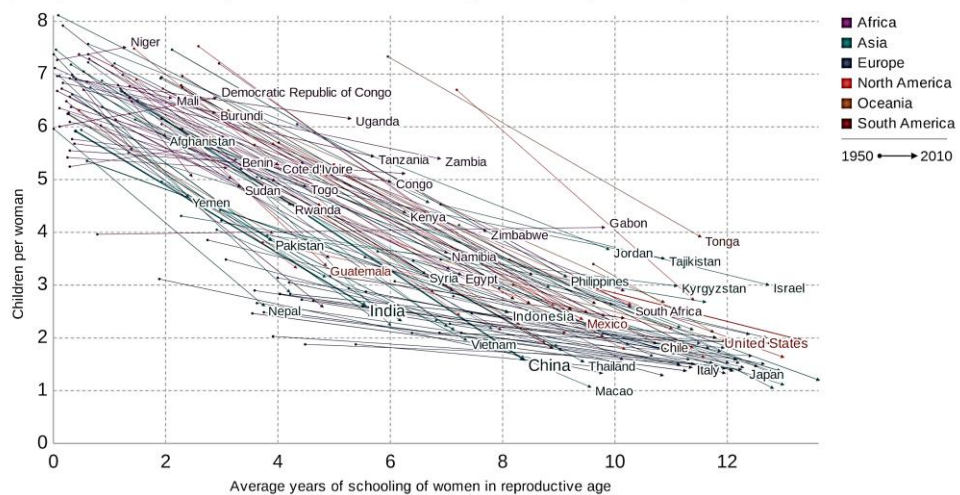

2.8 Women & Demographic Change

Factors That Influence Population Growth & Decline

Changing Role of Women

Women's educational attainment vs. number of children per woman, 1950 to 2010

Shown on the x-axis is the average number of years of schooling of women in the reproductive age (15 to 49 years). On the y-axis you find the 'total fertility rate' – the number of live births per woman in reproductive age.

1. What is the title of the chart?
2. What info is provided on the x-axis?
3. What info is provided on the y-axis?
4. What trends do you see?
5. What predictions can you make based on the trends?
