

Day 26, Unit 2, October 30 & 31

Agenda:

1. Finish FRQ Practice (10 minutes-start immediately after you write your agenda)
2. 2.10 & 2.11 Causes & Types of Migration
3. Migration Webquest

Reminders:

1. Reading Guides (Ch. 2 & 3) due Friday, 11/3 (A Day) & Monday, 11/6 (B Day)
2. Reading Quiz is the same day.
3. Make sure you can still log into AP Classroom. You will need to do this on 11/3 and 11/6.

Free Response Questions

- 1) Write in complete sentences. If it is not, College Board will not award points.
- 2) Label each part of the FRQ Responses. (A., B., C., D.) - you must be clear which response responses goes with each prompt. Start each response on a new line. You do not need to skip lines.
- 3) Pay close attention to task verb as response will need to align.
- 4) Use part of prompt in first sentence of response.
- 5) Be as specific as possible. Incorporate AP Human Vocabulary whenever relevant.
- 6) Some FRQs will have a stimulus or two while others will have no stimulus.
- 7) On the National Exam, you will have 75 minutes to complete three FRQs. Each FRQ will have seven parts. It is worth half of your overall score.

The following **task verbs** are commonly used in the free-response questions:

Compare: Provide a description or explanation of similarities and/or differences.

Define: Provide a specific meaning for a word or concept.

Describe: Provide the relevant characteristics of a specified topic.

Explain: Provide information about how or why a relationship, process, pattern, position, or outcome occurs, using evidence and/or reasoning.

Identify: Indicate or provide information about a specified topic, without elaboration or explanation.

FRQ Practice

20:00

The following **task verbs** are commonly used in the free-response questions:

Compare: Provide a description or explanation of similarities and/or differences.

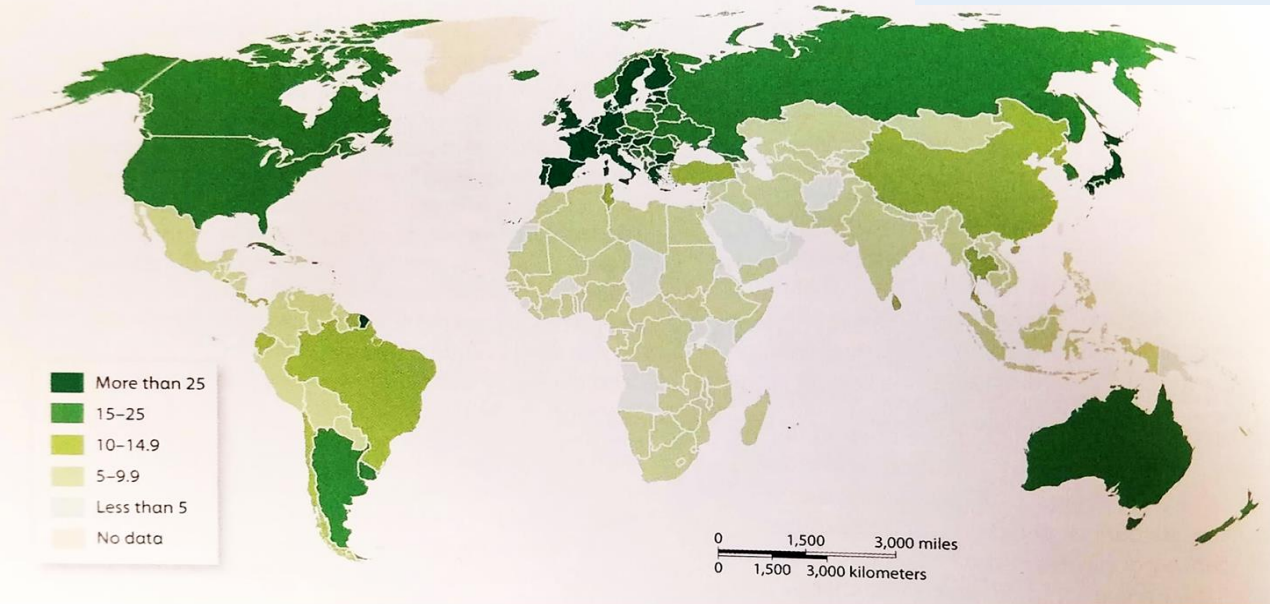

Define: Provide a specific meaning for a word or concept.

Describe: Provide the relevant characteristics of a specified topic.

Explain: Provide information about how or why a relationship, process, pattern, position, or outcome occurs, using evidence and/or reasoning.

Identify: Indicate or provide information about a specified topic, without elaboration or explanation.

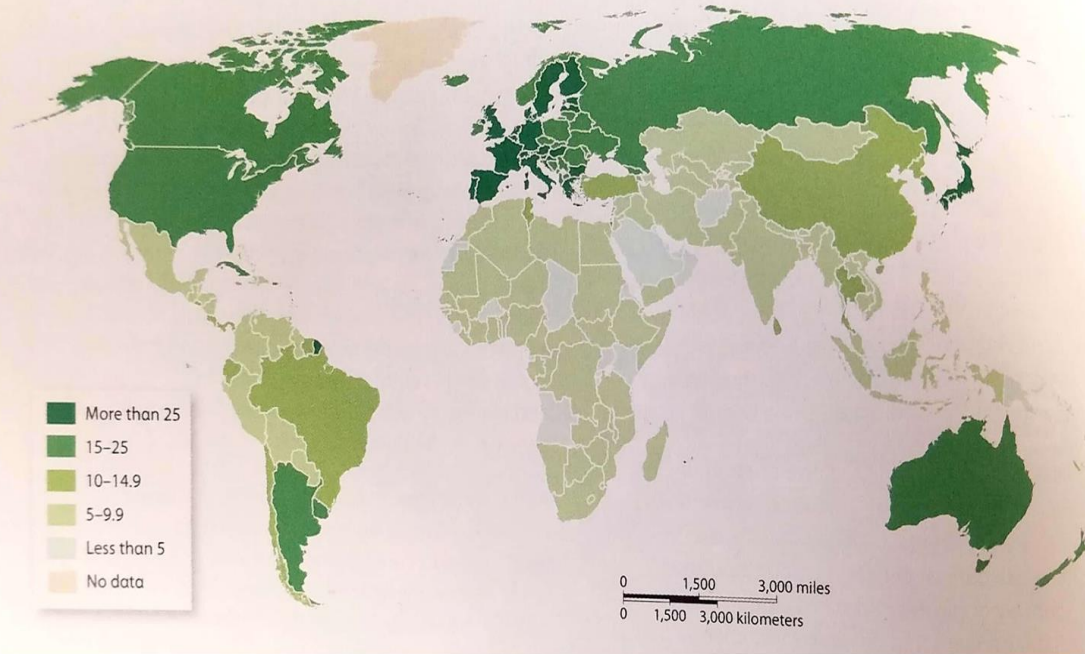

ELDERLY DEPENDENCY RATIO, 2018

FRQ Practice

ELDERLY DEPENDENCY RATIO, 2018

A. DEFINE
The elderly dependency ratio including how it is calculated.

B. IDENTIFY
The world region on the map with the highest elderly dependency ratio.

C. EXPLAIN
One factor that contributes to a high elderly dependency ratio.

D. DESCRIBE
One positive consequence of a high elderly dependency ratio.

E. DESCRIBE
One negative consequence to a high elderly dependency ratio.

- A. The elderly dependency ratio is the number of people in the elderly age group that are dependent on those that are of working-age. This ratio is calculated by dividing the population of those that are above the age of 65 by the population of those between the ages of 15 and 64 and multiplying by 100.
- B. The world region on the map with the highest elderly dependency ratio is Western Europe.
- C. One factor that contributes to a high elderly dependency ratio is a high life expectancy. As countries develop, the health system of the country improves. As more people have access to health care, improved medicines, and health specialists, more people begin to live to older ages. This contributes to a high elderly dependency ratio because many of these countries that are experiencing very high life expectancies are also experiencing very low fertility rates. As the number of elderly increases along with a decrease in the number births the result is a high elderly dependency ratio.
- D. One positive consequence of a high elderly dependency ratio is growth in the elderly care industry. Seniors use various specialty health technology and devices that are not used by other age groups. As the number of elderly increases so does the need for more elderly specialized care. For example, the elderly care industry is worth \$400 billion in the United States which is an increase from previous years.
- E. One negative consequence of a high elderly dependency ratio is the fact that increasing numbers of elderly add to the costs of various government-sponsored retirement programs such as Social Security. These government sponsored programs are funded by taxes paid by younger people who are still in the workforce. As the costs of these programs increase, so does the tax burden on the working age population.

Warm Up

1. Based on the video, what causes some people to migrate?
2. What would be your top 5 reasons?

https://www.youtube.com/watch?v=Elpc0Mb4OlA&ab_channel=AnitaPico

Day 24, October 28 & 31

Objectives:

1. Explain how different causal factors encourage migration.
2. Describe types of forced and voluntary migration

Types of Movement

Cyclic

- Involves a journey of regularity that **begins at our home and brings us back to it.**
- These movements create **activity spaces**: which are spaces of daily routines.

Periodic

- Periodic movement involves a **longer period** of time **away from home and is less regular and returning to same place is not always the case.**
- In **transhumance***, the periodic movement is based on the seasons.

*the action or practice of moving livestock from one grazing ground to another in a seasonal cycle, typically to lowlands in winter and highlands in summer.

Identify what type of movement is occurring

Travelling to school each day.

A rancher moving his herd from season to season.

Commuting to work Monday - Friday

Attending an out-of-state college.

The background image shows a futuristic, high-tech interior. It features glowing blue and orange lights, curved metallic structures, and computer workstations. The scene is illuminated with vibrant blue and orange neon lights, creating a high-tech, futuristic atmosphere. The architecture includes large, curved, metallic-looking structures that frame the space. In the foreground, there's a curved, glass-enclosed area with blue lighting. In the background, there are rows of computer workstations with monitors and ergonomic chairs, all set against a backdrop of glowing orange and blue light panels. The overall aesthetic is sleek and modern, suggesting a high-tech environment like a control room or a futuristic office.

Transferring to Germany for military service

Actual Migration

Permanent movement that results in permanent relocation which is not characteristic of Cyclic or Periodic Movements

Immigration vs. Emigration

Immigration = movement
into a location (I for IN)

Emigration = movement
away from a location (E for
EXIT)

- Net migration = difference between number of emigrants and immigrants
- Positive net migration = more people move in than exit
- Negative net migration = more people exit than enter

Reasons for Migration

Push Factors

- Factors that cause a person to leave (exit) an area.

Pull Factors

- Factors that cause a person to be drawn into an area.

- Armed Conflict
- Oppressive Governments

Political Issues

- Job Opportunity
- Cost of Living
- Growth and Recession

Economic Issues

- Crime/Pollution /Traffic Problems
- Climate:

Weather/Natural Disasters

Environmental Issues

- Returning to homeland
- Reconnecting with family

Social & Cultural Issues

- Improved or difficult transportation

Transportation Issues

Long-distance migration can be dangerous, time-consuming, and physically/mentally demanding.

So, why do people do it??

Model: Ravenstein's Laws of Migration

Ernst Ravenstein

Studied the movement of migrants in England during the 19th century

Proposed several principles or “laws” that describe the trends he witnessed

In general, economic conditions push and pull people in predictable directions.

- population size and distance influence migration decisions.

Ravenstein's Laws

Every migration flow generates a return or counter-migration.

The majority of migrants move a short distance.

Migrants who move longer distances tend to choose big-city destinations.

People in rural areas migrate MORE than people in cities.

Families are less likely to move than young adults.

Males migrate over longer distances than females. Most migrants are young males.

Most migration occurs because of economic issues.

Most Migration done in Steps/Series of stages

Cities grow more by migration than natural increase.

Summary of Ravenstein's Laws

TOTAL INTERNATIONAL MIGRANT STOCK BY REGION AND SEX, MID-YEAR 2020

Global

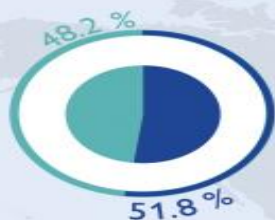

281 million

51.9%

48.1%

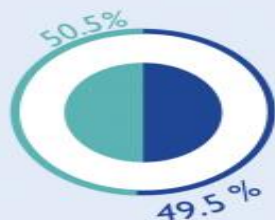

Northern
America
58.7 m

Gravity Model

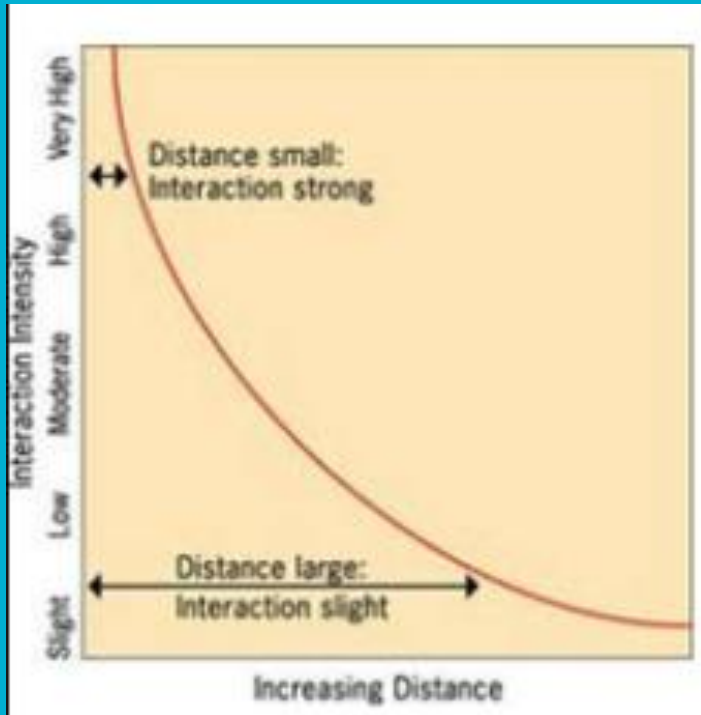

Predicts the amount of spatial interaction (migration, trade, tourism, etc.) that will occur between two or more places.

Level of interaction between two locations depends on the size of population and the distance between them.

- The larger the pop, the more interaction the city will receive.
- The shorter the distance between two locations, the more interaction.

Distance Decay Theory & Limitations of Gravity Model

Gravity Model is influenced by Push/Pull Factors (not just a mathematical equation).

Push and Pull factors impact the decisions made by voluntary migrants. These factors are then impacted by individual circumstances and scale of migration (how far).

Migrant perception of pull factors may not be accurate if they are not familiar with target destination. This is related to **distance decay**. The farther away they are, the less likely they know a great deal about their target destination.

Due to globalization/time-space compression, migrants may know a lot more about a destination than in the past.

Forced vs. Voluntary Migration

Forced = People are compelled to move due to economic, social, cultural, political, or eNvironmental (CESPN) factors (forced push factors)

Voluntary = people make the choice to move to a new place (CESPN Pull Factors)

Voluntary Migration

● Transnational

- Immigrate to new country
- Retain culture of home
- Remittances (send \$ home)

● Internal

- Movement within a country's borders

● Transhumance (periodic)

- Practiced by nomads
- Seasonal herding/pastoral nomads

● Chain

- People move to a location because others from their community migrated there
- Family, friends, associates, etc.

● Step

- Series of smaller moves to get to ultimate destination
- Intervening obstacles and opportunities

● Rural-to-Urban

- Urban areas offer more economic opportunities, education, health care, etc.
- Most important current trend

● Guest Workers

- Temporary laborers (periodic); migrant labor

Forced Migration

- Refugees
 - Forced to leave their country for fear of political, ethnic/racial, religious oppression, persecution or death
 - Can request political asylum
 - Asylum: right to protection in new country
- Internally Displaced Persons
 - Forced to flee homes but remain within their country borders
 - Violence
 - Natural or Human-made disasters
- Enslaved/Slavery/Human Trafficking
 - The Atlantic Slave Trade
 - Modern Day Human Trafficking
 - Can occur internally or internationally

Forced & Voluntary Migration Webquest

Copy of PDF Webquest → Day 26 Folder

Required: Stops 1, 4, 5, 6 and 7

Student Choice: Step 2 & Step 3 (pick one location - Rwanda, Afghanistan, South Sudan, Myanmar or Syria);
