

Name: _____

Period: ____

Population Pyramid Analysis

1. Click on this link: [Population Pyramids of the World](https://www.populationpyramid.net/) and choose a country other than the United States. Toggle over population line graph to see pyramids in different years. **Sketch Pyramid shape of from three different years.**

Country Name: _____

1970

2000

2030

2. Examine what happens within the country over time. **Describe** several characteristics of the population that this pyramid represents. *Questions to think about: What type of pyramid is it? What can you tell me about the economy? The birth rate? Health care? What other characteristics (rich, poor, growing, rural, urban, shrinking, getting richer, growing quickly or slowing down, etc.) do you see? Can you make any inferences about the culture of the country based on the population pyramid?*

3. **Explain** at least **one positive and one negative** attribute of the population/country based on these pyramids. Themes to consider: societal needs, government provided benefits/services, labor force, tax base, economic power, brain drain, availability of resources, availability of health care, quality of health care, future needs, education, infant mortality, longevity, etc.

4. See if you can **identify** any anomalies in the pyramids...and then go research on the web to try and figure out what is going on or has already happened. **Explain** what happened below. *Pyramid features to look for: Extremely high number of females between the ages of 80 to 85? A strange lack of men aged 30 to 35? A very unbalanced number of males to females in the 0 to 5 age bracket? A sudden and severe drop off of children under 10 years of age? Could it be related to a war that killed a large number of the men, or a cultural preference for male babies, or a government sponsored program to radically lower the birth rate? Go find out! Record response on back of worksheet.*
