

Day 24, Unit 2, October 24 & 25

1. Summit Preparations
2. Population Summit
3. Case Study: China's One Child Policy

Population Policy Summit Prep

Role: You are a representative of your country and their population policy and are eager to learn about what other countries are doing as well as sharing your country's policy along with its effects (positive or negative) with other population policy representatives from around the world.

Take a few minutes to review your country's policy and your poster. There will be four rounds. One partner will interview another country's representative while the other partner, takes notes on form provided. Then, you will switch roles.

Population Policy Summit In Action

Role: You are a representative of your country and their population policy and are eager to learn about what other countries are doing as well as sharing your country's policy along with its effects (positive or negative) with other population policy representatives from around the world.

In four rounds of interviews, you will seek to learn about the policies

- **from one country that has a very different stance (anti or pro) than your country**
- **from two countries that have a similar stance (as your country) and learn if their specific policies are the same or different from your country's.**
- **Wild Card: any country you have spoken with yet.**

One partner will conduct the interview and the other partner will take notes. You will switch roles each time.

- **Use Interview Questions Provided and fill out Interview Form**

**FINALIZE YOUR NOTES
&
SUBMIT YOUR POSTERS**

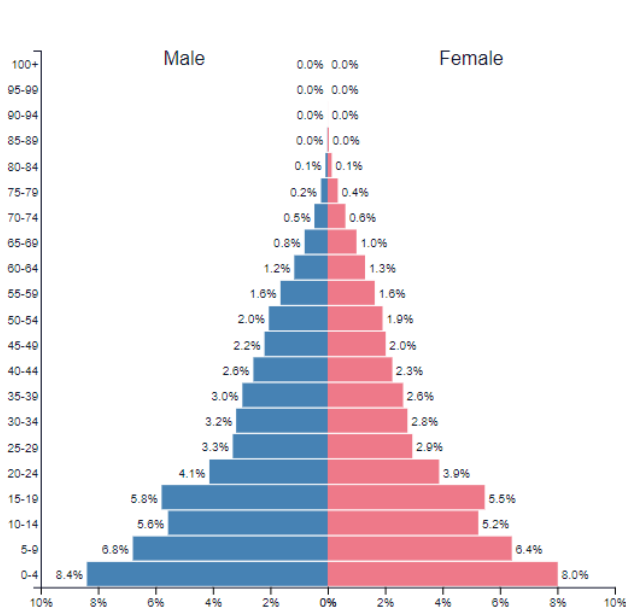

Case Study: Effects of China's One Child Policy

*Write Notes on new 2.9
guided notes; we will finish
the rest of those next class*

Before & After the One-Child Policy (1979)

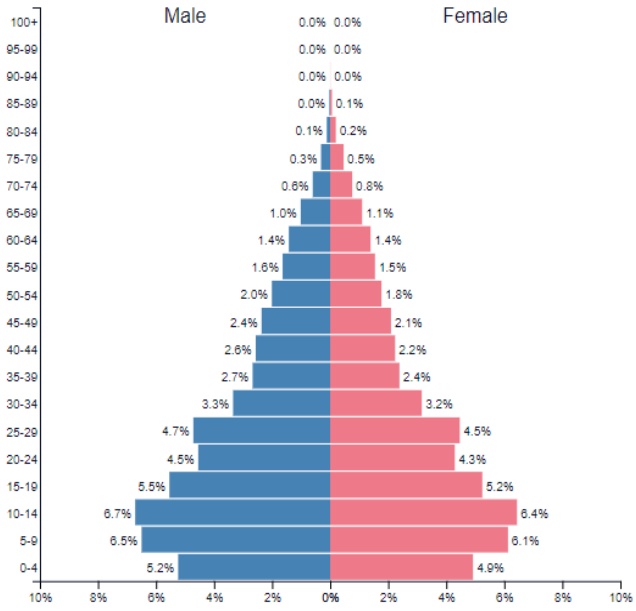

1970

Population: 827,601,385

1980

Population: 1,000,089,228

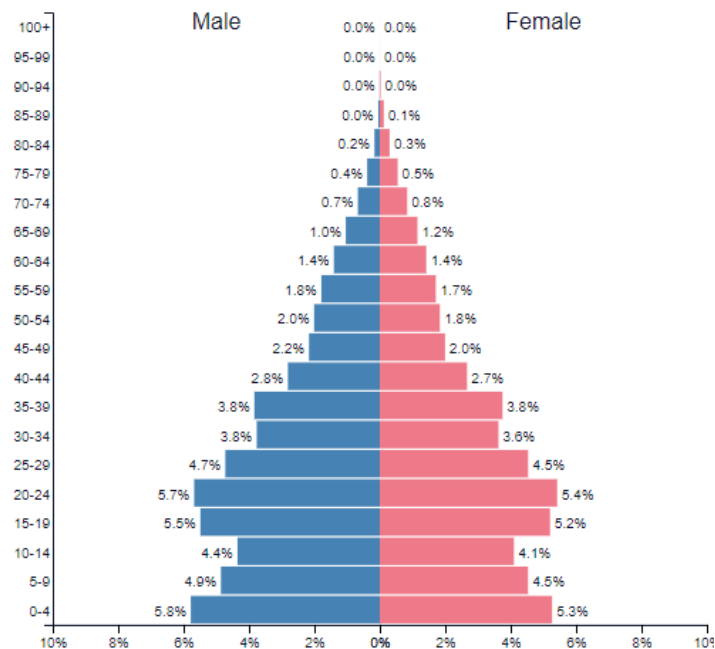

After the One-Child Policy

China ▼

1990

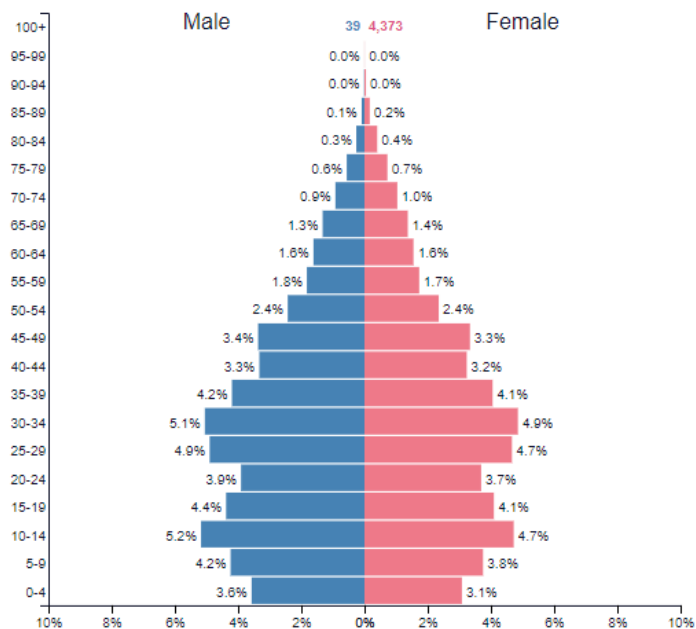

Population: 1,153,704,252

China ▼

2000

Population: 1,264,099,069

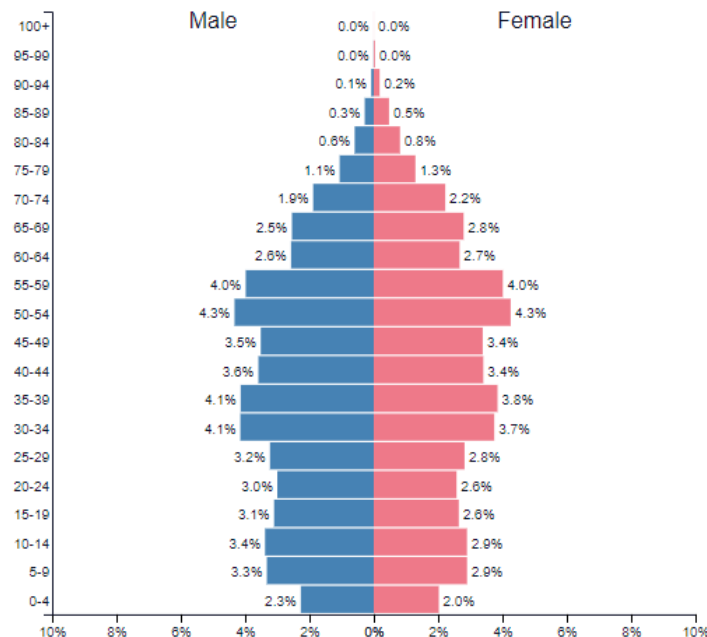

After the One-Child Policy

China ▼

2023

Population: 1,425,671,351

Total fertility rate

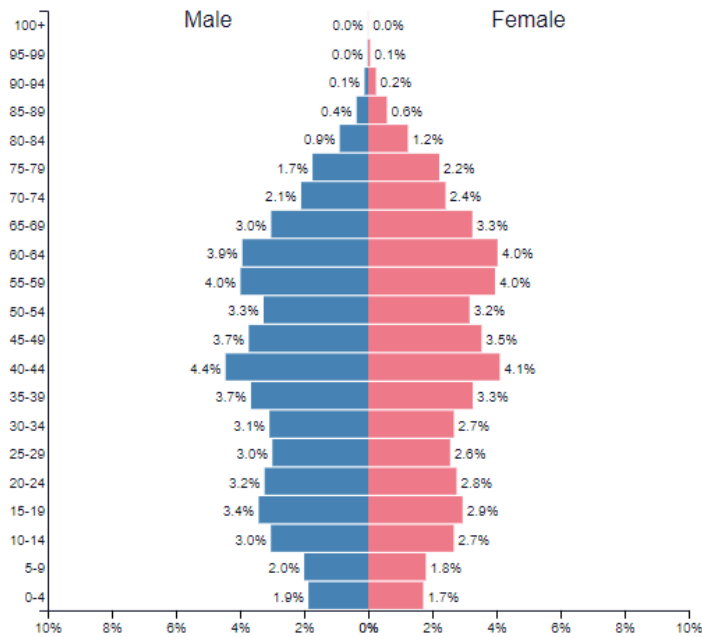

1.45 children born/woman (2023 est.)

comparison ranking: 211

China ▼

2030

Population: 1,415,605,905

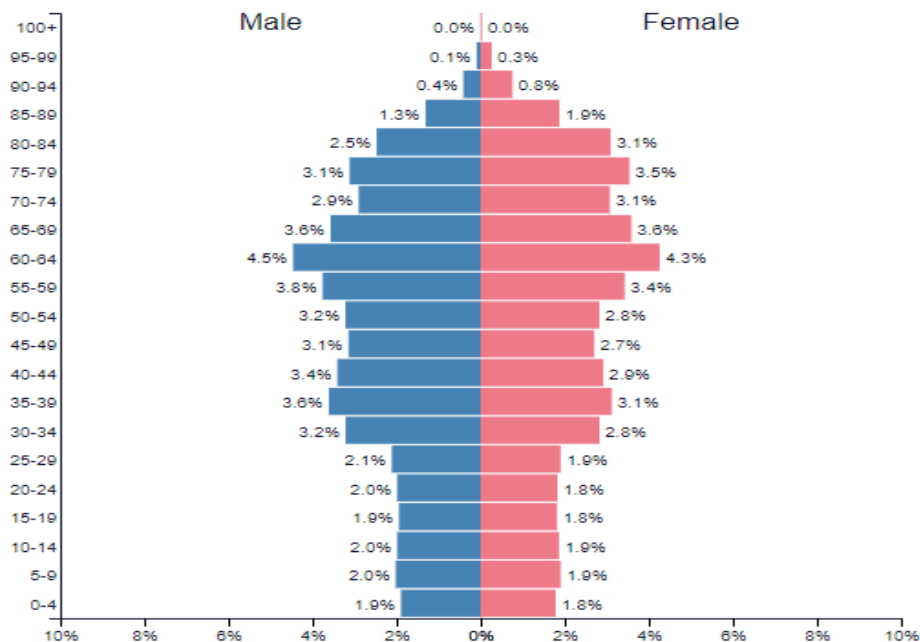

Still predicting a drop in total population

China ▼

2050

Population: 1,312,636,324

Indirect Consequences of One-Child Policy

Male preference led to a skewed sex ratio

-female infanticide and gender specific abortions or forced miscarriages

-Bare branches & Bachelor villages

-Increase in human trafficking

*This can also be seen in India but it is due to dowry

Faced with a population that is shrinking and ageing, Chinese policymakers are attempting to engineer a baby boom after more than three decades of a Malthusian family planning regime better-known as the one-child policy. Central policy planners have loosened restrictions on family sizes, and now all married couples can have two children. There is talk of the limits being dropped altogether, and amid aggressive propaganda drives, local officials are experimenting with subsidies and incentives for parents.

But these efforts appear to be too little too late. Birthrates have fallen and are likely to continue to drop as parents like Xu decide against having more children. More young women are pushing back against state propaganda and family pressure, while improving education standards and income levels have delayed marriage and childbirth. Moreover, decades of the one-child policy have made single-child households the norm, experts say.

Can China recover from its disastrous one-child policy?

Families are now being urged to have at least two children, but it may be too late to convince parents to embrace the change by Lily Kuo and Xueying Wang in Shenyang

“China should have stopped the policy 28 years ago. Now it’s too late,” says Yi Fuxian, a senior scientist at the University of Wisconsin in Madison and a longtime critic of the family planning policies.

Demographers warn that China’s population will begin to shrink in the next decade, potentially derailing the world’s second-largest economy, with a far-reaching global impact. China’s birthrate last year was at its lowest since the founding of the People’s Republic in 1949, with 15.23 million births, dramatically lower than the 21-23 million officials had expected.
