

UNIT 6 LEARNING GUIDE

1. Listed below are the Learning Objectives for Unit 6. In the table below write your own exam question that covers the given objective. Use this to structure your own learning guide and better focus your study time. Also determine your confidence with each objective with the numerical key below.

KEY: 1 = Not Confident 2 = Somewhat Confident
3 = Absolutely Confident

Unit 6 Learning Objective	Create Your Own Questions	Confidence
Examine distance traveled along a path with respect to coordinate positions.		
Graph parametric equations.		
Convert between rectangular relations and parametric equations.		
Create parametric equations to model real-world problems.		
Calculate solutions to problems involving vector addition, subtraction, and scalar multiplication.		
Determine the component form of a vector given the magnitude and direction.		
Determine the component form and magnitude given a vector on a plane.		
Determine the magnitude and direction of a vector given in component form.		
Model projectile motion using parametric equations.		
Determine parameters of projectile motion such as angle, time, and distance.		

Unit 6 Learning Objective	Create Your Own Questions	Confidence
Graph and label given points in the polar coordinate system.		
Convert between rectangular and polar coordinates.		
Graph polar equations.		
Write equations of polar functions given a graph.		
Convert polar functions into rectangular equations.		

2. What are your goals for the Unit 6 Exam? Remember that a Satisfaction Goal is the grade you would need to be satisfied with your work, and a Pride Goal is the grade necessary for you to feel pride in your work.

Satisfaction Goal = _____/100
 _____/100

Pride Goal =
